

Purchase renewable power with a Macquarie solar PPA

Macquarie Principal Finance

Reduce emissions and save on your electricity costs with a solar power purchase agreement

A solar power purchase agreement (PPA) from Macquarie allows you to reduce your carbon emissions and your electricity bill by going 'off grid' for a proportion, or potentially all, of your electricity consumption during the day.

Macquarie will install, own and operate the solar photovoltaic system. We utilise only proven technologies with long operational track records that require minimal ongoing maintenance and limited business interruption at your sites.

Long-term cost savings and zero-carbon emissions from a 100% renewable PPA

How it works

A solar photovoltaic system is installed on your premises. We pay to install, own, maintain and run it. You have no upfront and maintenance costs.

During the day, the solar installation generates power that is first consumed by you. Any excess can be exported to the grid.

Power generated is 100% renewable and zero-carbon. Pricing is via a long-term PPA with Macquarie.

At the end of the agreement, you can either buy the panels at a pre-agreed price or Macquarie will remove the installation from your premises.

The benefits for your business

Security of renewable, zero-carbon electricity

No upfront capital costs

Day one savings

Fixed power price with long-term PPA

Protection against rising prices

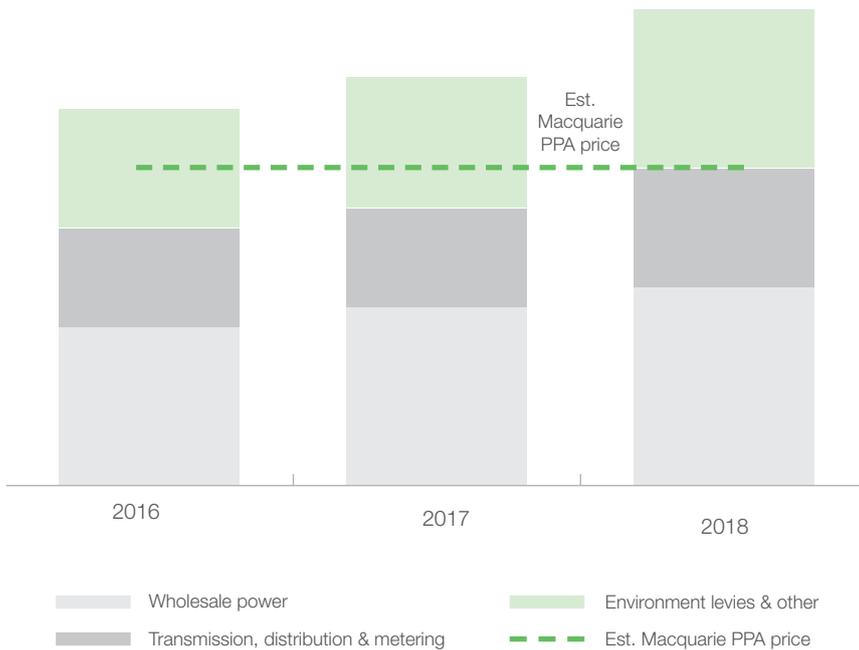

Save on network and environmental levies

No technology or maintenance risk for customer

Proven technology from trusted suppliers

Quick installation with minimal customer disruption

Illustration of Macquarie PPA compared to grid energy price (£/MWh)

Macquarie Principal Finance has completed >13,000 solar installations

Our track record

Macquarie has led over £15 billion of investment into low-carbon energy infrastructure and waste management, across a range of technologies for over 180 projects.

We've previously developed, constructed, funded and brought into operation 13,000 rooftop solar installations as well as ground-mounted solar projects. We're now working with some of the UK's largest corporates to deliver on-site PPA solar.

Macquarie is also working to develop battery storage solutions for industrial and commercial clients, finance energy efficiency initiatives and we've installed over one million smart meters.

Each 1MW solar installation from Macquarie can save >250 tonnes of carbon emissions each year¹

1. Based on UK grid emission factor from Department of Business, Energy and Industrial Strategy and a standard UK site

Next steps

1

Provide us with your approximate energy consumption and the locations of your sites

2

We'll model your site and tailor a proposal to your needs

3

Discuss and agree terms of the power purchase agreement

Get in touch

Our solar PPAs are part of a range of energy solutions we offer to help improve your energy efficiency, reduce your carbon emissions and manage your energy costs.
